

ML Labs 2026 instructions

FKY, LUR

1 Introduction

The exercises proposed during the practical sessions of the machine learning course are based on the mini-courses available on the kaggle platform.

Kaggle is an online community of data scientists and machine learning practitioners. Kaggle allows users to find and publish datasets, explore and build models, work with other data scientists and machine learning engineers, and enter competitions to solve data science challenges.

Kaggle has embedded notebooks similar to jupyter notebooks that allow users to experiment and build machine learning algorithms in a fully web-based environment.

2 Lab Sessions

We will ask you to fulfill the following mini-courses available on Kaggle during the different sessions. Your presence during the lab sessions is not mandatory but is recommended, as we provide additional explanations on ML/AI related matters that are not always covered by the theoretical classes, as well as advice and tips on how best to complete the project.

- 18/3/2026 Intro to machine learning and Intermediate machine learning
- 25/3/2026 Feature Engineering
- 1/4/2026 Intro to deep learning
- 8/4/2026 AI Computer Vision

To facilitate the realization of the project (and of the other mini-courses), we recommend that you also complete the following mini-courses:

- Pandas : To learn how to use the pandas library efficiently in Python.
- Data visualization : To learn how to create correct and pertinent data visualization graphs.

The Kaggle platform has a long list of other courses that could interest you and allow you to develop competencies in data analysis here.

3 Project

You will be evaluated based on a project; instructions for this project will be provided during the second lab session on the 6/5/2026.
